Review: Forecasting Coffee Shop Ingredient Usage with AR(2)

I. SUMMARY RATING

3 - weak accept

II. STRONG POINTS OF THE PAPER

- 1) Clean and transparent architecture
 - The paper clearly describes the architecture of the forecasting model, making it easy to understand.
- 2) Well communicated design choices
 - The authors provide clear explanations for their design choices.
 - The authors do not oversell their approach and algorithm.

III. WEAK POINTS OF THE PAPER

- 1) Model Choice
 - Choosing AR(2) as the forecasting model is quite obviously not the best choice for the problem.
 - No trend
 - No seasonality
- 2) Reported Evaluation results
 - Fig. 2 shows how badly the model is performing.
 - This is nice to see, in that the authors are not overselling their approach and algorithm; however, it should have been a tell to use a different approach.
 - The huge error is also not discussed enough in the paper.
