Exercise Sheet 4: Demo Paper

With this exercise sheet, you will write a paper to pitch the demo you created in the last exercise. The paper will be written in $\text{\LaTeX}$. You might use the free version of overleaf¹ if you do not have a local installation. Unfortunately, our exercise rooms this year are not equipped with PCs and the PC pools are not entirely usable, yet, so please bring a laptop or tablet if you want to work in the exercise rooms or need to show something to explain a question. If you do not have any portable device you can use for the exercise, please consider using the lending service of the General Students' Committee².

Please read the whole exercise sheet before starting to work. Your paper will be peer-reviewed by two other groups.

1 The Template

The template for the demo paper is available in moodle³. Do not change the main features of the template, i.e., page margins, text sizes, and the two column layout must not be changed. However, you are free to use tables or figures spanning both columns. The template contains the required sections and some hints on what is expected in the respective sections. You are free to introduce subsections or additional sections if necessary. The final paper must have a length between 1.5 and 2 pages, excluding the references.

2 Upload

Go to moodle and navigate to the task 'Peer Review Demo paper'⁴. Upload your paper in pdf format. **Again, it is sufficient if one member of a group uploads the file.** This moodle element will also be used in the next exercise to write the peer reviews for two other groups.

3 Select a Presentation Slot

Go to moodle and navigate to the poll 'Demo Presentation Slots'⁵. Select your preferred presentation slot. Please note that only slots with at least 3 groups will be established as presentation slots.

4 Prepare the presentation

A demo presentation usually includes two main aspects:

- a) A poster presentation of the idea of the demo
- b) A live demonstration of the demo and the opportunity for the visitor to play around with the demo

Create a poster you can use to explain what your demo is doing, why this is interesting/important, and how it is doing this. This will most likely include the figures from your demo paper and a few bullet points. Use the corporate design of UHH ⁶ and scale it down if needed. If you do not want to print the poster yourself, prepare an **A3 poster in pdf format** and upload it via moodle⁷ until the monday **before** your presentation. Please upload only one file per group.

Prepare a pitch for your demo that you can present to visitors so they quickly understand what your demo is about. Additionally, develop at least a rough idea how to guide visitors through your poster and the live demo.
